

# Ggobi\_windows\_download\_instruction

*February 27, 2018*

1. first of all, most easy way is try run this command in R studio: `source("http://www.ggobi.org/downloads/install.r")`. Then install rggobi package, after that remember to `library(rggobi)` to check it is working or not. If not, you may need to install GTK+ and Ggobi manually, so keep following.
2. install GTK+, following this link carefully: [GTK+](#)
3. install Ggobi, follow this : [Ggobi](#)
4. Try to `library(rggobi)` again, I think it should be working now.
