Ggobi_windows_download_instruction

February 27, 2018

1. first of all, most easy way is try run this command in R studio: source("http://www.ggobi. org/downloads/install.r"). Then install rggobi package, after that remember to library rggobi to check it is working or not. If not, you may need to install GTK+ and Ggobi manually, so keep following.

2. install GTK+, following this link carefully: GTK+ (https://www.gtk.org/download/macos. php)

3. install Ggobi, follow this : Ggobi (http://www.ggobi.org/downloads/)

4. Try to library rggobi again, I think it should be working now.
